

Quick Fix Guide - CoachFlow 404 Error

Your site is showing 404 because environment variables are missing in Netlify.

5-Minute Fix

Step 1: Go to Netlify Dashboard

Open: <https://app.netlify.com/>

Step 2: Select Your Site

Click on your **CoachFlow** site

Step 3: Open Environment Variables

Navigate to:

Site settings  Environment variables

Or use this direct link format:

<https://app.netlify.com/sites/YOUR-SITE-NAME/configuration/env>

Step 4: Add These Variables

Click **Add a variable** and add each of these:

Variable 1 (REQUIRED)

Key: SUPABASE_URL
Value: <https://your-project.supabase.co>

Where to find it: Supabase Dashboard → Project Settings → API → Project URL

Variable 2 (REQUIRED)

Key: SUPABASE_ANON_KEY
Value: eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9...

Where to find it: Supabase Dashboard → Project Settings → API → Project API keys → `anon` `public`

Variable 3 (OPTIONAL)

Key: STRIPE_PUBLISHABLE_KEY
Value: pk_test_51... or pk_live_51...

Where to find it: Stripe Dashboard → Developers → API keys → Publishable key

Note: If you don't add Stripe keys, the site will work in demo mode (no payments).

Step 5: Save Variables

Click **Save** after adding each variable

Step 6: Trigger Deploy

1. Go to **Deploys** tab
2. Click **Trigger deploy**
3. Select **Deploy site**
4. Wait ~60 seconds

Step 7: Done!

Your site should now be live at: `https://your-site.netlify.app`

How to Know It Worked

Success Indicators

1. Build Log Shows:

-  Build erfolgreich abgeschlossen!
-  Supabase URL & Key gesetzt
- Published at: `https://your-site.netlify.app`

2. Site Loads:

- No 404 error
- You see the FittiCoach homepage
- Login button works

3. Build Time:

- Takes ~45-90 seconds (normal)
- Not 5 seconds (that means it failed)

Still Failing?

1. Check Build Log:

- Deploys → Latest deploy → View details
- Look for error messages

2. Common Issues:

-  Environment variables not saved
-  Typo in variable names (must match exactly)
-  Wrong Supabase credentials
-  Supabase project is paused

3. Fix:

- Double-check variable names (case-sensitive!)
 - Verify credentials in Supabase dashboard
 - Wake up Supabase project if paused
-

Visual Checklist

- [] 1. Opened Netlify Dashboard
- [] 2. Selected CoachFlow site
- [] 3. Went to Site settings  Environment variables
- [] 4. Added SUPABASE_URL
- [] 5. Added SUPABASE_ANON_KEY
- [] 6. Added STRIPE_PUBLISHABLE_KEY (optional)
- [] 7. Clicked Save **for** each variable
- [] 8. Went to Deploys tab
- [] 9. Clicked Trigger deploy  Deploy site
- [] 10. Waited **for** build to complete
- [] 11. Checked build **log for** success
- [] 12. Visited site URL
- [] 13. No more 404 error! 

That's It!

Your CoachFlow site should now be live and working.
